

# Year 3 Design and Technology: Structures using CAD

How can we use computer software to design and make packaging?

## Prior Learning

- I have used different joining, cutting and finishing techniques with paper and card.
- I have a basic understanding of 2-D and 3-D shapes and the properties of some materials.
- I have some experience of using software to draw accurate shapes, such as Microsoft Word.

## Sticky Knowledge

- I can investigate and evaluate a range of shell structures including the materials, components and techniques that have been used.
- I can develop my knowledge of nets of cubes and cuboids and, where appropriate, more complex 3D shapes.
- I can develop and use knowledge of how to construct strong, stiff shell structures.
- I can talk about and show my ideas, focusing on the needs of the user, what the product will look like and how it will function.
- I can develop my ideas through the analysis of existing shell structures and use computer-aided design to model and communicate ideas.
- I can plan the order of the main stages of making.
- I can select and use appropriate tools and software to measure, mark out, cut, score, shape and assemble with some accuracy.
- I can use computer-generated finishing techniques suitable for the product I am creating.
- I can test and evaluate my own product against design criteria and the intended user and purpose.

## Vocabulary

<b>Product*</b>	What you are making.
<b>User*</b>	Who is going to use the product.
<b>Purpose*</b>	What the product is going to be used for.
<b>Function*</b>	What does your product need to do to work.
<b>CAD</b>	Computer-Aided Design. The use of computer software to create part of a design.
<b>Shell Structure</b>	A hollow structure with a thin outer covering.
<b>Net</b>	The flat or opened-out shape of a object, such as a box.
<b>Edge</b>	Where two surfaces meet at an angle.
<b>Face</b>	A surface of a 3D (three dimensional) shape.
<b>Vertex (vertices)</b>	The corners of a 3D shape where edges meet.
<b>Flap</b>	An extra section of paper or cardboard used to glue a shell structure together.
<b>Scoring</b>	Scratch or cut a line on a surface.

ABCD  
JKLM

**Font**—letters and symbols that are written in the same style.

**Text**—writing that is seen on packaging.

**Graphics**—an image or picture included on the packaging.

**Logo**—an image that represents the people or company who have made the product.

# Year 3 Design and Technology: Structures using CAD

How can we use computer software to design and make packaging?

What shape do I want my net to make?

How can I use Microsoft Word to create my packaging design?

Help Video: [Creating Nets with Microsoft Word - YouTube](#)

1. Insert your first **face** shape into Microsoft

2. Change the side lengths (or dimensions) if you need a certain size.

3. Use **copy** and **paste** to create more shapes that are exact same.

4. Use **format** tools to add text, graphics, colours and your design.

5. Insert **tabs** to make gluing your net together later easier.

6. Hold **ctrl** (don't let go) and click on all of the shapes. Group them together.
